

National Marine Fisheries Service - 2020 Status of U.S. Fisheries

Status Determination Criteria and Stock Assessment Citation Table

This table contains: 1) overfishing and overfished status determination criteria for each stock/stock complex; 2) year of stock assessment that supports the most recent overfishing and/or overfished status; and 3) year of catch/overfishing limit (OFL) for stocks that use catch/OFL to support overfishing status. Wherever "N/A" is indicated, a stock assessment or catch/OFL was not used (some stocks have an unknown overfishing and/or overfished status).

The stock assessment that supports the current stock status can be found on NOAA Fisheries **Stock SMART**.

FMP	Stock/Stock Complex	Overfishing Criteria Definition in FMP	Overfished Criteria Definition in FMP	Asmt Year	Catch/OFL Year
American Samoa Archipelago Ecosystem	American Samoa Bottomfish Multi-species Complex	Overfishing occurs when F is greater than FMSY B / c BMSY if the stock biomass (B) is less than or equal to c BMSY, or when F is greater than FMSY if the stock biomass (B) is greater than c BMSY, where c is equal to the greater of 1 minus the natural mortality rate (M) or 0.5. Standardized values of fishing effort (E) and catch-per-unit-effort (CPUE) are used as proxies for F and B, respectively.	A stock is overfished when stock biomass (B) is less than c BMSY, where c is equal to the greater of 1 minus the natural mortality rate (M) or 0.5. CPUE is used as a proxy for B.	2019	N/A
Atlantic Herring	Atlantic herring - Northwestern Atlantic Coast	If the stock biomass is equal to or greater than BMSY, overfishing occurs when F exceeds FMSY. If the stock biomass is less than BMSY, overfishing occurs when F exceeds the level that has a 50-percent probability of rebuilding the stock biomass to BMSY in 5 years (F _{THRESHOLD}).	The stock is overfished when stock biomass is less than ½ BMSY.	2020	N/A
Mackerel, Squid and Butterfish	Atlantic chub mackerel - Mid-Atlantic Coast	The stock is subject to overfishing if catch exceeds the OFL.	The stock is overfished if catch exceeds the OFL in three consecutive years.	N/A	N/A
Atlantic Mackerel, Squid and Butterfish	Atlantic mackerel - Gulf of Maine / Cape Hatteras	Overfishing will be defined to occur when the fishing mortality rate exceeds F _{threshold} .	The stock is overfished when the spawning stock biomass is less than 1/2 SSB _{msy} .	2018	N/A
Atlantic Mackerel, Squid and Butterfish	Butterfish - Gulf of Maine / Cape Hatteras	Overfishing will be defined to occur when the catch associated with a threshold fishing mortality rate of FMSY is exceeded.	The stock is overfished when the biomass is less than the biomass threshold of ½BMSY.	2017	N/A
Atlantic Mackerel, Squid and Butterfish	Longfin inshore squid - Georges Bank / Cape Hatteras& Status	Overfishing occurs when fishing mortality exceeds F _{Threshold}	The stock is overfished when the biomass is less than the biomass threshold of ½BMSY.	2020	N/A
Atlantic Mackerel, Squid and Butterfish	Northern shortfin squid - Northwestern Atlantic Coast	Overfishing will be defined to occur when the catch associated with a threshold fishing mortality rate of FMSY is exceeded.	The stock is overfished when the biomass is less than the biomass threshold of ½BMSY.	2005	N/A
Atlantic Salmon	Atlantic salmon - Gulf of Maine	Overfishing occurs if fishing exceeds the fishing mortality rate threshold, set at zero, or as close as possible when taking into account discard mortality.	This stock is overfished and currently listed as endangered under the Endangered Species Act.	2017	N/A

National Marine Fisheries Service - 2020 Status of U.S. Fisheries

FMP	Stock/Stock Complex	Overfishing Criteria Definition in FMP	Overfished Criteria Definition in FMP	Asmt Year	Catch/OFL Year
Atlantic Sea Scallop	Sea scallop - Northwestern Atlantic Coast	If stock biomass is equal or greater than Bmsy as measured by an absolute value of scallop meat (mt), overfishing occurs when fishing mortality exceeds Fmsy. If the total stock biomass is below Bmsy, overfishing occurs when fishing mortality exceeds the level that has a 50 percent probability to rebuild stock biomass to Bmsy in 10 years.	A scallop stock is in an overfished condition when stock biomass is below $\frac{1}{2}$ Bmsy.	2020	N/A
Atlantic Surfclam and Ocean Quahog	Atlantic surfclam - Mid-Atlantic Coast	Overfishing occurs when F exceeds FMSY or FMSY proxy.	The stock is overfished when the stock size is less than $\frac{1}{2}$ of the BMSY or BMSY proxy.	2020	N/A
Atlantic Surfclam and Ocean Quahog	Ocean quahog - Atlantic Coast	Overfishing occurs when F exceeds FMSY or FMSY proxy.	The stock is overfished when the stock size is less than $\frac{1}{2}$ of the BMSY or BMSY proxy.	2020	N/A
Bering Sea/Aleutian Islands King and Tanner Crabs	Blue king crab - Pribilof Islands	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2019	2019
Bering Sea/Aleutian Islands King and Tanner Crabs	Blue king crab - Saint Matthew Island	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2020	2019
Bering Sea/Aleutian Islands King and Tanner Crabs	Golden king crab - Aleutian Islands	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2019	2019
Bering Sea/Aleutian Islands King and Tanner Crabs	Golden king crab - Pribilof Islands	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2017	2019
Bering Sea/Aleutian Islands King and Tanner Crabs	Red king crab - Bristol Bay	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2020	2019
Bering Sea/Aleutian Islands King and Tanner Crabs	Red king crab - Norton Sound	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2020	2019
Bering Sea/Aleutian Islands King and Tanner Crabs	Red king crab - Pribilof Islands	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2019	2019
Bering Sea/Aleutian Islands King and Tanner Crabs	Red king crab - Western Aleutian Islands	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2017	2019
Bering Sea/Aleutian Islands King and Tanner Crabs	Snow crab - Bering Sea	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2019	2019

National Marine Fisheries Service - 2020 Status of U.S. Fisheries

FMP	Stock/Stock Complex	Overfishing Criteria Definition in FMP	Overfished Criteria Definition in FMP	Asmt Year	Catch/OFL Year
Bering Sea/Aleutian Islands King and Tanner Crabs	Southern Tanner crab - Bering Sea	A stock is subject to overfishing if the catch from the previous fishing year exceeds the previous year's OFL.	A stock is overfished if the annual biomass estimate is less than the established MSST, defined as $\frac{1}{2}$ BMSY.	2019	2019
Bluefish	Bluefish - Atlantic Coast	Overfishing occurs when F exceeds the threshold FMSY, defined as F40%.	The stock is overfished when the minimum biomass is less than $\frac{1}{2}$ BMSY.	2019	N/A
Coastal Migratory Pelagic Resources of the Gulf of Mexico and South Atlantic	Cobia - Gulf of Mexico	Overfishing is defined as an F that exceeds MFMT' = FMSY where FMSY = F30%SPR.	A stock is overfished when the stock size is less than the minimum stock size threshold, where MSST = (1-M)*BMSY.	2020	N/A
Coastal Migratory Pelagic Resources of the Gulf of Mexico and South Atlantic	King mackerel - Gulf of Mexico	Overfishing is defined as an F that exceeds MFMT' = FMSY where FMSY = F30%SPR.	A stock is overfished when the stock size is less than the minimum stock size threshold, where MSST = (1-M)*BMSY.	2020	
Coastal Migratory Pelagic Resources of the Gulf of Mexico and South Atlantic	King mackerel - Southern Atlantic Coast	Overfishing is defined as an F that exceeds MFMT' = FMSY where FMSY = F30%SPR.	A stock is overfished when the stock size is less than the minimum stock size threshold, where MSST = (1-M)*BMSY.	2020	
Coastal Migratory Pelagic Resources of the Gulf of Mexico and South Atlantic	Spanish mackerel - Gulf of Mexico	Overfishing is defined as an F that exceeds MFMT' = FMSY where FMSY = F30%SPR.	A stock is overfished when the stock size is less than the minimum stock size threshold, where MSST = (1-M)*BMSY.	2013	N/A
Coastal Migratory Pelagic Resources of the Gulf of Mexico and South Atlantic	Spanish mackerel - Southern Atlantic Coast	Overfishing is defined as an F that exceeds MFMT' = FMSY where FMSY = F30%SPR.	A stock is overfished when the stock size is less than the minimum stock size threshold, where MSST = (1-M)*BMSY.	2013	N/A
Coastal Pelagic Species	Jack mackerel - Pacific Coast	Overfishing occurs in a fishery whenever fishing occurs over a period of one year or more at a rate that is high enough to jeopardize the capacity of the stock to produce MSY on a continuing basis if applied in the long term. In operational terms, overfishing occurs in the CPS fishery whenever catch exceeds OFL.	A stock is overfished when the biomass level is low enough to jeopardize the capacity of the stock to produce MSY on a continuing basis.	N/A	2019
Coastal Pelagic Species	Krill (Euphausiacea) - Pacific Coast	Undefined	Undefined	N/A	N/A
Coastal Pelagic Species	Northern anchovy - Northern Pacific Coast	Overfishing occurs in a fishery whenever fishing occurs over a period of one year or more at a rate that is high enough to jeopardize the capacity of the stock to produce MSY on a continuing basis if applied in the long term. In operational terms, overfishing occurs in the CPS fishery whenever catch exceeds OFL.	A stock is overfished when the biomass level is low enough to jeopardize the capacity of the stock to produce MSY on a continuing basis.	N/A	N/A

National Marine Fisheries Service - 2020 Status of U.S. Fisheries

Coastal Pelagic Species	Northern anchovy - Southern Pacific Coast	Overfishing occurs in a fishery whenever fishing occurs over a period of one year or more at a rate that is high enough to jeopardize the capacity of the stock to produce MSY on a continuing basis if applied in the long term. In operational terms, overfishing occurs in the CPS fishery whenever catch exceeds OFL.	A stock is overfished when the biomass level is low enough to jeopardize the capacity of the stock to produce MSY on a continuing basis.	N/A	2019
Coastal Pelagic Species	Opalescent inshore squid - Pacific Coast	Overfishing occurs in the fishery if the FMSY proxy resulting in egg escapement $\geq 30\%$.	Undefined	N/A	N/A
Coastal Pelagic Species	Pacific chub mackerel - Pacific Coast	Overfishing occurs in a fishery whenever fishing occurs over a period of one year or more at a rate that is high enough to jeopardize the capacity of the stock to produce MSY on a continuing basis if applied in the long term. In operational terms, overfishing occurs in the CPS fishery whenever catch exceeds OFL.	A stock is overfished when the biomass level is low enough to jeopardize the capacity of the stock to produce MSY on a continuing basis.	2019	2019
Coastal Pelagic Species	Pacific sardine - Northern Subpopulation	Overfishing occurs in a fishery whenever fishing occurs over a period of one year or more at a rate that is high enough to jeopardize the capacity of the stock to produce MSY on a continuing basis if applied in the long term. In operational terms, overfishing occurs in the CPS fishery whenever catch exceeds OFL.	A stock is overfished when the biomass level is low enough to jeopardize the capacity of the stock to produce MSY on a continuing basis.	2020	2019
Consolidated Atlantic Highly Migratory Species	Albacore - North Atlantic	Overfishing occurs when the MFMT is exceeded, which is set at $F_{limit} = FMSY$.	A stock is overfished when the stock level biomass falls below $MSST$, which is set at $MSST = BLIMIT' = (1-M)BMSY$ when $M < 0.5$; $MSST = BLIMIT' = 0.5BMSY$ when $M \geq 0.5$.	2019	N/A
Consolidated Atlantic Highly Migratory Species	Atlantic sharpnose shark - Atlantic	Overfishing occurs when the MFMT is exceeded, which is set at $F_{limit} = FMSY$.	A stock is overfished when the stock level biomass falls below $MSST$, which is set at $MSST = BLIMIT' = (1-M)SSFMSY$ when $M < 0.5$; $MSST = BLIMIT' = 0.5SSFMSY$ when $M \geq 0.5$.	2013	N/A
Consolidated Atlantic Highly Migratory Species	Atlantic sharpnose shark - Gulf of Mexico	Overfishing occurs when the MFMT is exceeded, which is set at $F_{limit} = FMSY$.	A stock is overfished when the stock level biomass falls below $MSST$, which is set at $MSST = BLIMIT' = (1-M)SSFMSY$ when $M < 0.5$; $MSST = BLIMIT' = 0.5SSFMSY$ when $M \geq 0.5$.	2013	N/A
Consolidated Atlantic Highly Migratory Species	Bigeye tuna - Atlantic	Overfishing occurs when the MFMT is exceeded, which is set at $F_{limit} = FMSY$.	A stock is overfished when the stock level biomass falls below $MSST$, which is set at $MSST = BLIMIT' = (1-M)BMSY$ when $M < 0.5$; $MSST = BLIMIT' = 0.5BMSY$ when $M \geq 0.5$.	2018	N/A

National Marine Fisheries Service - 2020 Status of U.S. Fisheries

Overfished is defined as a stock size less than $MSST$ is set = $BMSY(1-c)$; where c = the natural mortality rate (M) or 0.50, whichever is smaller.	2020	N/A
Spiny Lobster Fishery of Puerto Rico and the U.S. Virgin Islands	Caribbean spiny lobster - St. Croix	Overfishing occurs when annual catches exceed the OFL (equal to MSY proxy), unless NMFS SEFSC (in consultation with the CFMC and its SSC) determines the overage occurred because data collection/monitoring improved, rather than because catches actually increased.	Overfished is defined as a stock size less than $MSST$ is set = $BMSY(1-c)$; where c = the natural mortality rate (M) or 0.50, whichever is smaller.	2020	N/A
Spiny Lobster Fishery of Puerto Rico and the U.S. Virgin Islands	Caribbean spiny lobster - St. Thomas / St. John	Overfishing occurs when annual catches exceed the OFL (equal to MSY proxy), unless NMFS SEFSC (in consultation with the CFMC and its SSC) determines the overage occurred because data collection/monitoring improved, rather than because catches actually increased.	Overfished is defined as a stock size less than $MSST$ is set = $BMSY(1-c)$; where c = the natural mortality rate (M) or 0.50, whichever is smaller.	2020	N/A
Spiny Lobster in the Gulf of Mexico and South Atlantic	Caribbean spiny lobster - Southern Atlantic Coast / Gulf of Mexico	Overfishing exist when the eggs per recruit ratio of the exploited population to the unexploited population is reduced below 5% and recruitment of small lobsters into the fishery has declined for three consecutive fishing years.	Undefined	2005	N/A
Summer Flounder, Scup and Black Sea Bass	Black sea bass - Mid-Atlantic Coast	Overfishing occurs when F exceeds F_{MSY} or F_{MSY} proxy.	The stock is overfished when the stock size is less than $\frac{1}{2}$ of the $BMSY$ or $BMSY$ proxy.	2019	N/A
Summer Flounder, Scup and Black Sea Bass	Scup - Atlantic Coast	Overfishing occurs when F exceeds F_{MSY} or F_{MSY} proxy.	The stock is overfished when the stock size is less than $\frac{1}{2}$ of the $BMSY$ or $BMSY$ proxy.	2019	N/A
Summer Flounder, Scup and Black Sea Bass	Summer flounder - Mid-Atlantic Coast	Overfishing occurs when F exceeds F_{MSY} or F_{MSY} proxy.	The stock is overfished when the stock size is less than $\frac{1}{2}$ of the $BMSY$ or $BMSY$ proxy.	2019	N/A
Tilefish	Blueline tilefish - Mid-Atlantic Coast	Undefined	Undefined	N/A	N/A
